Nationality: Filipino | Valid UAE driving license

PROFESSIONAL SUMMARY

Software Developer with 6+ years of experience building reliable software across Android, backend, desktop and web platforms. Strong in C#/.NET, Kotlin, Java and Azure, with a record of integrating APIs, processing data in real time and shipping applications where accuracy and uptime matter. Delivered production software for payment terminals, enterprise monitoring and asset systems, and live international events. Known for turning real operational problems into stable, maintainable solutions, mentoring teammates and collaborating across teams.

CORE SKILLS

Languages: C#, Java, Kotlin, JavaScript, PHP, VB.NET, HTML/CSS

Platforms and Frameworks: .NET, ASP.NET, Entity Framework, Windows Framework, Android SDK, MVVM, Monolithic, Microservices, REST APIs, JSON/XML

Cloud: Microsoft Azure, Azure DevOps

Hosting and Deployment: IIS, Azure App Service, Application deployment, Backups

Databases: MS SQL, MySQL (query tuning, stored procedures, triggers), SQLite, JDBC

Tools and Practices: Git, Jira, CI/CD, Firebase (Cloud Messaging, Crashlytics, Analytics), data synchronization, multithreading and concurrency, and led code review

PROFESSIONAL EXPERIENCE

Software Developer

Oct 2023 to Aug 2026

Emirates International Endurance Village | Abu Dhabi, UAE

- Kept live international endurance events running with split second timing accuracy by optimizing and evolving the real time timing system software for precision, stability and efficiency, and by setting up and supporting backend timing operations for major events, including the UAE President Cup and World Cup, with zero downtime.
- Got live timing data to the company's mobile application quickly and securely by building a secure API data integration layer and customizing API endpoints.
- Gave on site staff dependable tools tied directly to the timing system by developing Android kiosk applications (Kotlin, MVVM) integrated with it.
- Kept the supporting applications and API services reliably available by hosting and deploying them on IIS and maintaining backups.
- Reduced the risk of failures on race day by monitoring the timing system and its integrations in production and troubleshooting issues quickly as they appeared.
- Kept results accurate and responsive under heavy live data loads by applying multithreaded and asynchronous programming to process timing data concurrently, with tuned MySQL queries and stored procedures behind it.
- Kept pace with fast changing event conditions by partnering with cross functional teams to plan, implement and deliver timely updates.

Android Engineer

Feb 2022 to Apr 2023

Serino Payments | Manila, Philippines

- Enabled card acceptance across different POS terminal brands by designing and implementing Android payment applications and SDK features for EMV chip, contactless and magnetic stripe cards (debit, credit and gift) on Ingenico, VeriFone, Global Payments and PAX terminals.
- Made the payment SDK work beyond Android by developing and maintaining its platform independent components in Java Agnostic and C#, so the same payment logic could be reused across different environments.
- Removed slow manual upkeep of SDK documentation by building automated batch-processing tooling for documentation content in source code.
- Participated in daily stand-up meetings to provide project updates, share progress, and collaborate with team members to address any obstacles or challenges.

- Protected code quality and team coordination while the team lead was away by leading code reviews to uphold coding standards.

Software Developer (Production Engineer) **Aug 2019 to Feb 2022**

Sanyo Denki Philippines, Inc. | Olongapo City, Philippines

- Solved company-wide monitoring of the daily temperature and health checklist of all employees by building the SDP Monitoring App (Android Java, PHP, MySQL, Firebase), published on Google Play with 7,000+ downloads and using Firebase Cloud Messaging for real-time notifications.
- Replaced hard-to-track asset and equipment records by developing the Fixed Asset Management System, a mobile app built on Android, PHP and MS SQL.
- Brought structure to the purchasing of supplies and services by creating the Indirect Material Purchasing system, a Windows application built with VB.NET and MS SQL.
- Kept production applications supported while new features shipped by reviewing test results to guide further development, supporting live applications, mentoring junior members and presenting solutions to senior managers and stakeholders.

EDUCATION

Bachelor of Science in Information Technology **2019**

Subic Bay Colleges (SBCI), Inc. | Olongapo City, Philippines

CERTIFICATIONS

- C# Programming, Revised (Alison) 2020
- Java Programming, Hands-On (Active Learning) 2019
- CyberSecurity Seminar (Camptech Training Center) 2019
- Information Technology Network Seminar (Camptech Training Center) 2019
- Basic Computer Troubleshooting Seminar (Camptech Training Center) 2019
